A night photograph of a swimming pool with a central fountain. The fountain features a large, ornate, illuminated vase containing a plant, with water spraying upwards. Two jets of water on the right side of the pool are illuminated with bright blue light. The pool's surface is lit with numerous small, circular blue lights. In the background, a city skyline is visible under a twilight sky with soft orange and pink hues. The pool deck is made of dark stone tiles.

IMPORTANT ISSUES IN THE SYSTEM INSTALLATIONS

Operating voltage must be between 220 V 50 hz (180-240 V).
Ventilation holes on the device must be open , Not covered for any reason , or closed .
Measures must be taken for water splash or prevention of dripping on the device.
Absolutely use water-holding unit and check valve in ozone connection.
The place where the device operates should be in %50 humidity and ensure that it is not up to 25 degrees .
The place where the device operates should be provided dust-free , fresh air inlet .
Do device exterior cleaning with a moist cloth ,after separating from the electric.
Do not insert and drop any objects into the ventilation grille .
Do not use an ozone generator in bathrooms, kitchens and similar environments
Never breathe the ozone gas,It can destroy the respiratory system at high rates.
Immediately switch off the appliance in case of ozone gas odor and Ventilate the environment .

MAKE THE INSTALLATION, FIXING AND USAGE OF DEVICE BY YOUR AUTHORIZED PERSON. IF NOT FOLLOWED THE ABOVE REQUIREMENTS, THE DEVICE SHOULD EXCEED THE WARRANTY SCOPE.

WARNINGS

- While using chemical materials the labels shall be read carefully and instructions shall be followed
- The products shall never be mixed with each other, firstly one of them shall be thrown to the pool and then the other one.
- Gloves shall be used while chemical products are used, if there occurs eye contact eyes shall be washed with lots of water and immediately the person whose eye has contacted with these chemicals shall go to doctor for control.
- Chemical products shall be kept out of reach of children in a place which is dry, closed and airy and do not get closer to these chemicals with fire.

Problems and Their Solutions (for 100 m3)

PROBLEM	REASON	SOLUTION
Muddy Water	1) pH high 2) Over resolved solids 3) Bad filtering 4) Over organic subsidence	1) adjust pH between 7,2-7,6 2) Change some of the pool water with fresh water 3) Clean the filter with reverse washing. Perform the precipitation process by using 2 litres precipitator in 100 m3 water with liquid precipitator (shock implementation). 4) Perform shock with granule chlorine which has 90% ratio.
Yeşil su	Moss generation	Perform shock chlorination with granule chlorine which has 90% ratio. Add 2.5 litres antifouling compounds to the pool which is 100 m3 water after brushing the surfaces and sweeping them.
Kahverengi su	Availability of ferrous or managanese	Perform shock chlorination and add 1 litre for 100 m3 water
Göz ve deri tahrişi Kötü kokular	1) Unadjusted pH 2) combined chlorine is too much	1) control and adjust pH between 7,2-7,6 2) Perform shocking process by adding 1 kg chlorine which has 90 % ratio to 100 m3 water 3) Do not use the pool for 2 days

PUTTING INTO USE OF THE POOL IN THE BEGINNING OF THE SEASON

The processes below shall be followed in order to prohibit the problems that can be occurred during season.

- All the equipments shall be reviewed; if necessary the service shall be called.
- If it is necessary, the pool shall be emptied and then bottom of the pool and the side walls of the pool shall be cleaned with watered moss solvent.
- If the pool is empty, fill it up with water, if it is already filled up with water then make the filtration sytem work.
- Perform the precipitation process by using 2 litres precipitator for 100 m3 water. 3-4 hours after the precipitator is added to the water stop the filtration process. Perform the sweeping process after one night passes.
- Restart the filtration system.
- Bring the pH and alkanin values to ideal values.
- Evaluate all the measurement values again (ph). Alkanin, chlorine, combined chlorine, solidity.
- Perform shocking process with chlorine which has 90 % ratio. Start to routine implementation after the pool is put into use and the controls are completed.

SUPERIORS BY PLATE HEAT EXCHANGERS BY OTHER HEAT EXCHANGERS

It takes up little space, is efficient and economical.

- Easily cleaned in case of clogging and contamination.
- New plates can be added when capacity needs to be increased.
- Completed plates can easily be replaced with new ones.
- The prices are cheap because they are efficient.

Today Heat pumps are the most economical way to efficiently heat 0-200 m3 special outdoor or indoor pools from May to September (or depending on the region from October to April).

SPECIFICATIONS OF HEAT PUMPS

- The Heat Pump converts the solar energy in the air into heat and transfers it to the water in the pool.
- With each 1 kWh of electricity saved in the electricity meter, the zodiac heat pumps provide 5 kW / h heat transfer to your pool so you can use the free energy by 80%.
- The ratio between the power supplied by the heat pump in your pool and the power required for operation is called COP (Performance coefficient).
- Focusing on the needs of pool users, Zodiac has the heat pumps at the highest cop in the market It works extremely quiet.
- Heat pumps operate at temperatures above + 5, + 6 °C.
- However, Powerforce and Optipac models also have FOUR SEASON models operating at temperatures up to -8, -10 ° C.
- Outdoors, next to the machine room it must be installed by a pool of technicians.
- Heat pumps can be installed into the machine room is available in versions.

USAGE OF GLUE

To be glued surface must be clean. Apply to desired area with brush and combine the pieces
For better adhesion, we recommend that the surface be clean of burrs and surface dirt with sandpaper.
The openness of the glue and the drying time depend on the ambient conditions and the amount applied.
It is suitable for pressure and drain.

Storage Conditions

24 months as from production date in its original capped package. Keep the mouth tightly closed at +10 ° C and + 25 ° C in dry place

An aerial, high-angle photograph of a swimming pool. The pool is filled with clear, bright blue water. Several dark blue lane lines with white borders are visible, running diagonally across the frame from the top left towards the bottom right. The water's surface shows gentle ripples and reflections of light. In the bottom right corner, a portion of the pool's edge and a white tiled deck are visible.

An underwater photograph of a swimming pool. In the foreground, there are several lanes marked by blue lines on the pool floor. A swimmer is visible in the distance, swimming towards the right. On the right side, there is a large, curved, pink and white structure that looks like a large, curved, perforated pipe or a large, curved, perforated container. The water is clear and blue. The lighting is bright, suggesting a sunny day.
